

What is this project all about?

- **HOT lanes** are lanes that are open to vanpools, carpools, transit, motorcycles, and toll-paying solo drivers.
- The goal is to **improve traffic flow and long-term transit mobility** in the SR 167 corridor.
- **Performance and free access will be maintained** for transit, carpools, vanpools, and motorcycles.
- When there is space available in the carpool lane, **solo drivers will be allowed to enter the HOT lane by paying a toll.**
- The **four-year pilot project** will convert 9 miles of carpool lanes along SR 167 and is likely to open in 2008.
